

NoetixViews® for Oracle® E-Business Suite Global Extension

NoetixViews transforms the complexity of the Oracle E-Business Suite database into recognizable business views of data that are used by both IT professionals and business users to create custom reports and ad hoc queries. Using patented Noetix MetaBuilder™ technology, the views are automatically configured to support customer-specific setups, including key and descriptive flexfields. When Oracle introduces Oracle E-Business Suite changes, the views protect reports from breaking by remapping to the new database structure.

The NoetixViews Global Extension delivers these additional key features and benefits:

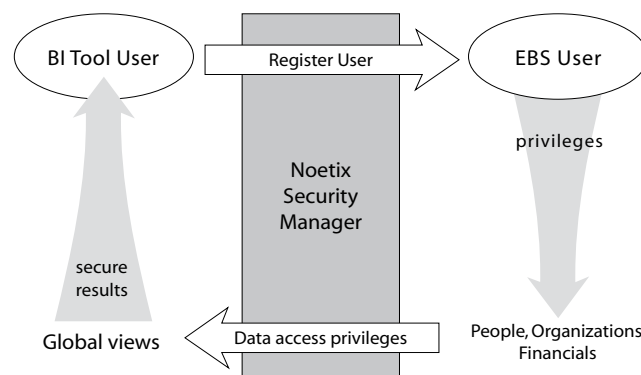

- ▶ Enterprise-wide reporting — data from all organizations is accessible from each global view
- ▶ Row-level security — the Oracle E-Business Suite user's data-access privileges are used to restrict the data returned by the global views, regardless of the BI tool
- ▶ Intuitive user interface — a well organized, intuitive presentation model in the leading BI tools and Noetix Search makes report authoring faster and easier than ever
- ▶ Rapid Implementation — fast installations and regenerations mean rapid deployment of upgrades, enhancements, and customizations

Enterprise Reporting

The global views represent the smallest-ever footprint of NoetixViews while maintaining our unparalleled coverage of Oracle E-Business Suite. A single set of global views for each NoetixViews module delivers data from all business groups, ledgers, operating units, and inventory organizations in your Oracle E-Business Suite instance, thus providing the ideal foundation for standardized, enterprise-wide reporting.

Row-level Security

Oracle E-Business Suite customers invest significant time and effort setting up and maintaining the access privileges to people, organizations, and financial data for end users. Row-level security in the global views puts this investment to use in reporting. Using Noetix Security Manager, BI tool users register their Oracle E-Business Suite username and responsibility. The global views then apply the associated data access privileges each time the user runs a report.

The global views include support for the following data access controls in Oracle E-Business Suite:

HR Security Profiles

Enforces Oracle HR security profiles to protect sensitive personnel and compensation data

Flexfield Security Rules

Ensures that each user accesses the accounting data consistent with their ledger access and flexfield security rules

Organization Access

Applies the user's Organization Access rules to supply chain, manufacturing, maintenance, and quality data

Operating Unit Access

Restricts rows to the Multi-Org Access Control or Operating Unit profile options assigned to the user

Intuitive User Interface

It has never been easier for users to create a report or ad hoc query with NoetixViews. An all new application area-based presentation model created by the Noetix Generator™ products for Oracle® Business Intelligence, Oracle® Discoverer, IBM® Cognos, SAP® BusinessObjects, and Noetix Platform organizes the global views in an intuitive, easy to use format, requiring little or no end-user training. The same organization of the views is presented in Noetix Search, creating a common experience between report authoring and the content analysis performed by Noetix Search users.

Enhanced Key Flexfield Support

The global views untangle the complex internal storage of key flexfields by including columns with your key flexfield segment names, not the generic column names from the Oracle tables. Additionally, the global views return data for the special segment qualifier columns of the Accounting key flexfield. The global views include the Balancing, Cost Center, Natural Account, and Intercompany segment qualifier columns, making it easy for developers to write accounting reports and users to understand the data in these reports.

Availability

NoetixViews Global Extension is available for the following:

- ▶ NoetixViews for Oracle Financials
- ▶ NoetixViews for Oracle US Federal Financials
- ▶ NoetixViews for Oracle Supply Chain Management
- ▶ NoetixViews for Oracle Human Resource Management System
