

Noetix® Solutions for Oracle® On Demand Customers

NoetixViews® and Noetix Generator for Oracle Discoverer are Available as Part of the Oracle E-Business Suite On Demand Solution

As a direct result of customer demand, Noetix has the distinction of being the first third-party solution ever approved to run in the Oracle On Demand environment. NoetixViews are available to meet your custom query and reporting needs, while Oracle Discoverer users are provided with a superior solution for auto-generating a Discoverer End User Layer to quickly unleash its power as a query tool.

Oracle On Demand customers will benefit from NoetixViews and Noetix EUL Generator in many ways, including:

- ▶ Simplified reporting for Discoverer users by reducing the complexity of Oracle E-Business Suite data
- ▶ Descriptive flexfields and decoded quick picks available through Noetix
- ▶ Performance optimized views allow your team to focus on using the information rather than searching for it
- ▶ Prebuilt joins facilitate joining Discoverer folders together
- ▶ Ease of customization to accomplish even the most complex reporting requirements
- ▶ Upgrade protection shields established reports from data structure changes common to Oracle E-Business Suite upgrades and patches

Oracle E-Business Suite On Demand customers who choose Noetix can focus on their core business while reducing the total cost of operations and improving business performance.

Maintenance for Noetix Products in the Oracle On Demand Environment

Noetix installations and upgrades are scheduled through your Oracle Service Delivery Manager or through Oracle On Demand

support personnel. Noetix Professional Services will be at the customer site to facilitate the Noetix implementation, and to conduct training for administrators and Noetix users.

Noetix recommends that NoetixViews be periodically regenerated to ensure that any changes to the Oracle E-Business Suite environment are captured. Changes that would require a regeneration include:

- ▶ Additional sets of books, operating units & inventory organizations
- ▶ Flexfield additions or changes
- ▶ Oracle database or Oracle E-Business Suite upgrades
- ▶ NoetixViews patches or customizations

Oracle On Demand customers can use Oracle's Concurrent Manager to schedule regenerations of NoetixViews.

Implementing the Noetix Platform: Noetix QueryServer® and Noetix WebQuery®

The Noetix Platform can easily be integrated into the Oracle On Demand environment where NoetixViews is hosted. Customers configure and host the Noetix QueryServer service. All features of the Platform are administered and maintained by the customer. Only NoetixViews for Oracle E-Business Suite are installed and upgraded by Oracle On Demand personnel.
