

NoetixViews® for Oracle® E-Business Suite

NoetixViews enables fast, easy, and secure custom report development for users of the Oracle E-Business Suite. Custom report development is an absolute necessity for achieving true success with Oracle, yet it is technically challenging. Thousands of Oracle users have overcome this challenge with Noetix. NoetixViews transforms the complexity of the Oracle database into recognizable business views of data that are used by technical and non-technical employees alike to create custom reports and ad hoc queries. [What is a Noetix View \(video - 02:41\)](#)

Customer-Specific Business Views—Automatically

NoetixViews uses patented Noetix MetaBuilder™ technology to generate database views that are automatically tailored to each customer's specific Oracle E-Business Suite configuration. These include:

- ▶ Multiorg setup, including business groups, sets of books, operating units, and inventory organizations
- ▶ More than 20 distinct key flexfields, including accounting, item category, system items, cost allocation, and territory
- ▶ Descriptive and context-sensitive descriptive flexfields
- ▶ Human resources, special, and extra information types
- ▶ Lookups and QuickCodes
- ▶ Flexfield language translations

Simplify Report Creation for Business Users

During the installation process, NoetixViews builds a help file that is tailored to the customer's Oracle E-Business Suite configuration. The help file guides business users and IT professionals through query and report development. It has fully searchable descriptions of views and columns, it lists the site-specific values from lookup tables, and includes hints on how to use the views to answer common business questions. Additional information

such as join-to columns and the identification of indexed columns provide IT professionals with valuable insight to expedite report development and optimize query performance. A cost-saving resource, the help file empowers end users to rapidly develop their own ad hoc queries and reports without taxing IT resources.

Upgrade Protection

Reports developed directly against the Oracle E-Business Suite database tables risk expensive rework when the applications are upgraded. Noetix protects reports from these database changes by automatically remapping new or changed tables to the views to reflect these changes. This feature eliminates the need for expensive report maintenance and simplifies the report migration process.

Advanced Integration with BI Tools

NoetixViews works with Noetix Generator™ to power up popular business intelligence (BI) reporting tools, such as BusinessObjects®, Cognos® BI, Oracle BI, and Oracle Discoverer to accelerate access to Oracle E-Business Suite application data.

Advanced Support for GL and HR Oracle E-Business Suite Security

NoetixViews works with both the Oracle GL and HRMS security models to protect highly sensitive data, even in Web-based distributed environments. Roles and security profile installation options provide record-level security capabilities.

Oracle E-Business Suite Coverage

NoetixViews for Oracle Financials—General Ledger, Payables, Receivables, and Assets

Includes more than 190 views covering areas such as balances, budgets, encumbrances, journal entries, invoices, payments, vendors, customers, cash receipts, receivable balances, asset assignments, depreciation detail, and unbooked assets.

NoetixViews for Oracle US Federal Financials—Federal Administrator, plus extensions to Financials and Purchasing

Includes 35 views covering budget appropriations and funds distributions with links to GL journal lines, plus funds available inquiry with drill to commitment, obligation, and expenditure details. Also includes extensions to 15 GL, AP, AR, and PO views adding transaction code and other key integration details.

NoetixViews for Oracle Order Management

Includes 37 views covering areas such as orders, pick slips, backlog, drop shipments, and returns.

NoetixViews for Oracle Purchasing

Includes 60 views covering purchase orders, on-hold invoices, receipts, approved suppliers, and integration with Payables invoices.
